

Jewellery Certificates for label printer

Customized with coloured logo,
manufactured already in small print run

- With logo
- In 4 colour printing
- From 250 pieces
- No extra printer needed

A certificate secures value and builds trust. Jewellery certificates in corporate design unmistakably testify to quality and performance of a company. Affordable jewellery certificates from eXtra4 enable even small jewellers and goldsmiths to warrant quality and origin with their own name.

From 250 pieces, digitally printed jewellery certificates can be manufactured individually. Produced as card labels endlessly on a roll, they can be marked with the characteristic data of a piece of jewellery via thermal transfer printer. The existing label printer can be used for this purpose. A special printer, as for plastic cards, is not necessary.

Jewellery certificates from eXtra4 consist of plastic foil compound with micro perforations. This smooth, flexible material is thin and lightweight but strong enough to be hard-wearing. Its gloss surface gives a shiny look and feel.

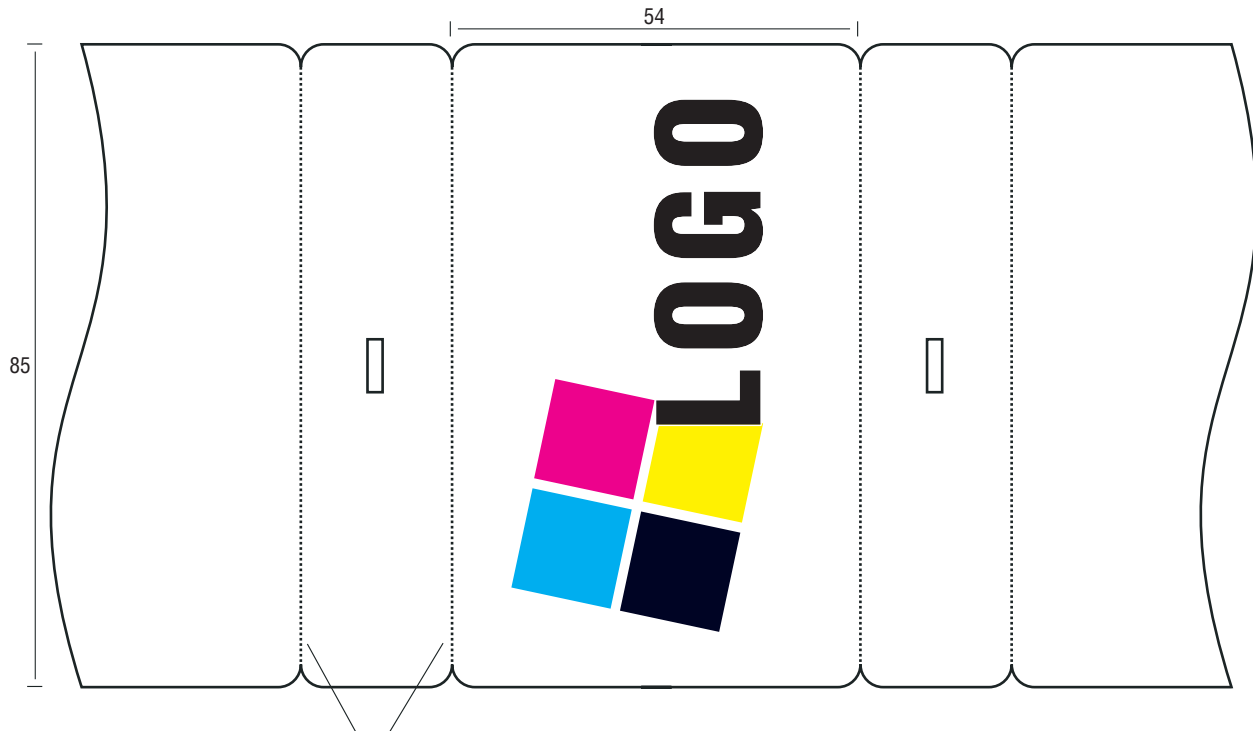

It is that easy to get your own certificates with logo: You provide us with the desired artwork in PDF format. We prepare the data, for which we charge a one-off small amount. Now you can use your logo time and time again for affordable jewellery certificates in consistent quality.

Jewellery Certificates with customized logo imprint, 4-coloured

CARD LABELS

95 5485S JK1

Micro perforation to the separating edges allows the simple and clean extraction of the cards from the label web.
